docuProof.io

Product Launch Declaration

February 28, 2026

This document formally declares the public launch of docuProof and establishes a verifiable record of the product's capabilities, architecture, and commitments as of this date. It is timestamped using docuProof itself.

1. DECLARATION OF LAUNCH

On February 28, 2026, BuyWayz LLC began the pre-launch of docuProof — a blockchain-anchored proof-of-existence service available at docuproof.io. Official public launch date: March 3, 2026. This document serves as a timestamped record of the product as it exists at the time of this declaration.

2. TECHNICAL ARCHITECTURE AT LAUNCH

Client-Side Processing

File hashing is performed entirely in the user's browser using the Web Crypto API (SHA-256). No file data is transmitted to docuProof servers at any point in the process.

Blockchain Anchoring

Cryptographic hashes are anchored to the Bitcoin blockchain via the OpenTimestamps protocol — an open-source, decentralized timestamping standard. OpenTimestamps batches multiple hashes into a single Bitcoin transaction, making the process efficient and cost-effective while maintaining full cryptographic integrity.

Certificate Generation

Upon successful anchoring (typically 1–3 hours after submission), a PDF Certificate of Proof is generated containing: Proof ID, file hash (SHA-256), Bitcoin block number, timestamp, QR code for verification, and explanatory documentation. The certificate is delivered to the user via email.

Verification

Any party can verify a proof by uploading the original file to docuproof.io, where the SHA-256 hash is recomputed in-browser and compared to the blockchain record. Verification can also be performed independently using standard OpenTimestamps tools.

3. PRODUCTS & SERVICES AT LAUNCH

Product	Description	Price
One-Time Proof	Single document timestamp with certificate	$2.89
Starter Plan	30 proofs per month	$9.75/mo
Pro Plan	150 proofs per month	$29.75/mo
RIP Add-on	Redundant Identity Preservation — verify 3 copies	$2.00

4. FOUNDING PRINCIPLES

docuProof is built on the following principles, which are recorded here as a permanent, verifiable commitment:

Privacy by design. We chose client-side hashing specifically so that we could make a truthful, unconditional statement: we never see your files.

Verification independence. We deliberately built on open standards (OpenTimestamps, Bitcoin) so that our users are never dependent on us. If docuProof disappears tomorrow, every proof ever created remains verifiable.

Conservative claims. We will always be precise about what a timestamp proves and does not prove. A timestamp proves existence — not authorship, not ownership, not truth.

Transparency. We timestamp our own commitments. This document is itself a docuProof-verified record. If we ever change what we promise, the original promise remains permanently on the blockchain.

5. CONTACT

docuProof is a product of BuyWayz LLC.
